ThroughTek Co., Ltd. (TUTK), a solution provider of AI-IoT cloud platform services, will be exhibiting at CES, in Las Vegas on January 5-8, 2023 in the Venetian Expo. TUTK will showcase its new AI-IoT products and solutions while giving visitors an introduction to learn how these products and solutions can benefit their businesses.

TUTK will showcase a series of AI-IoT products and solutions at CES, focusing on [Hausetopia App](#), [VSaaS PaaS](#), [Cloud VMS](#), [DMP](#) and more. These products can help businesses quickly realize cloud management of surveillance videos, data, and IoT devices and build an IoT device community conjoined by TUTK.

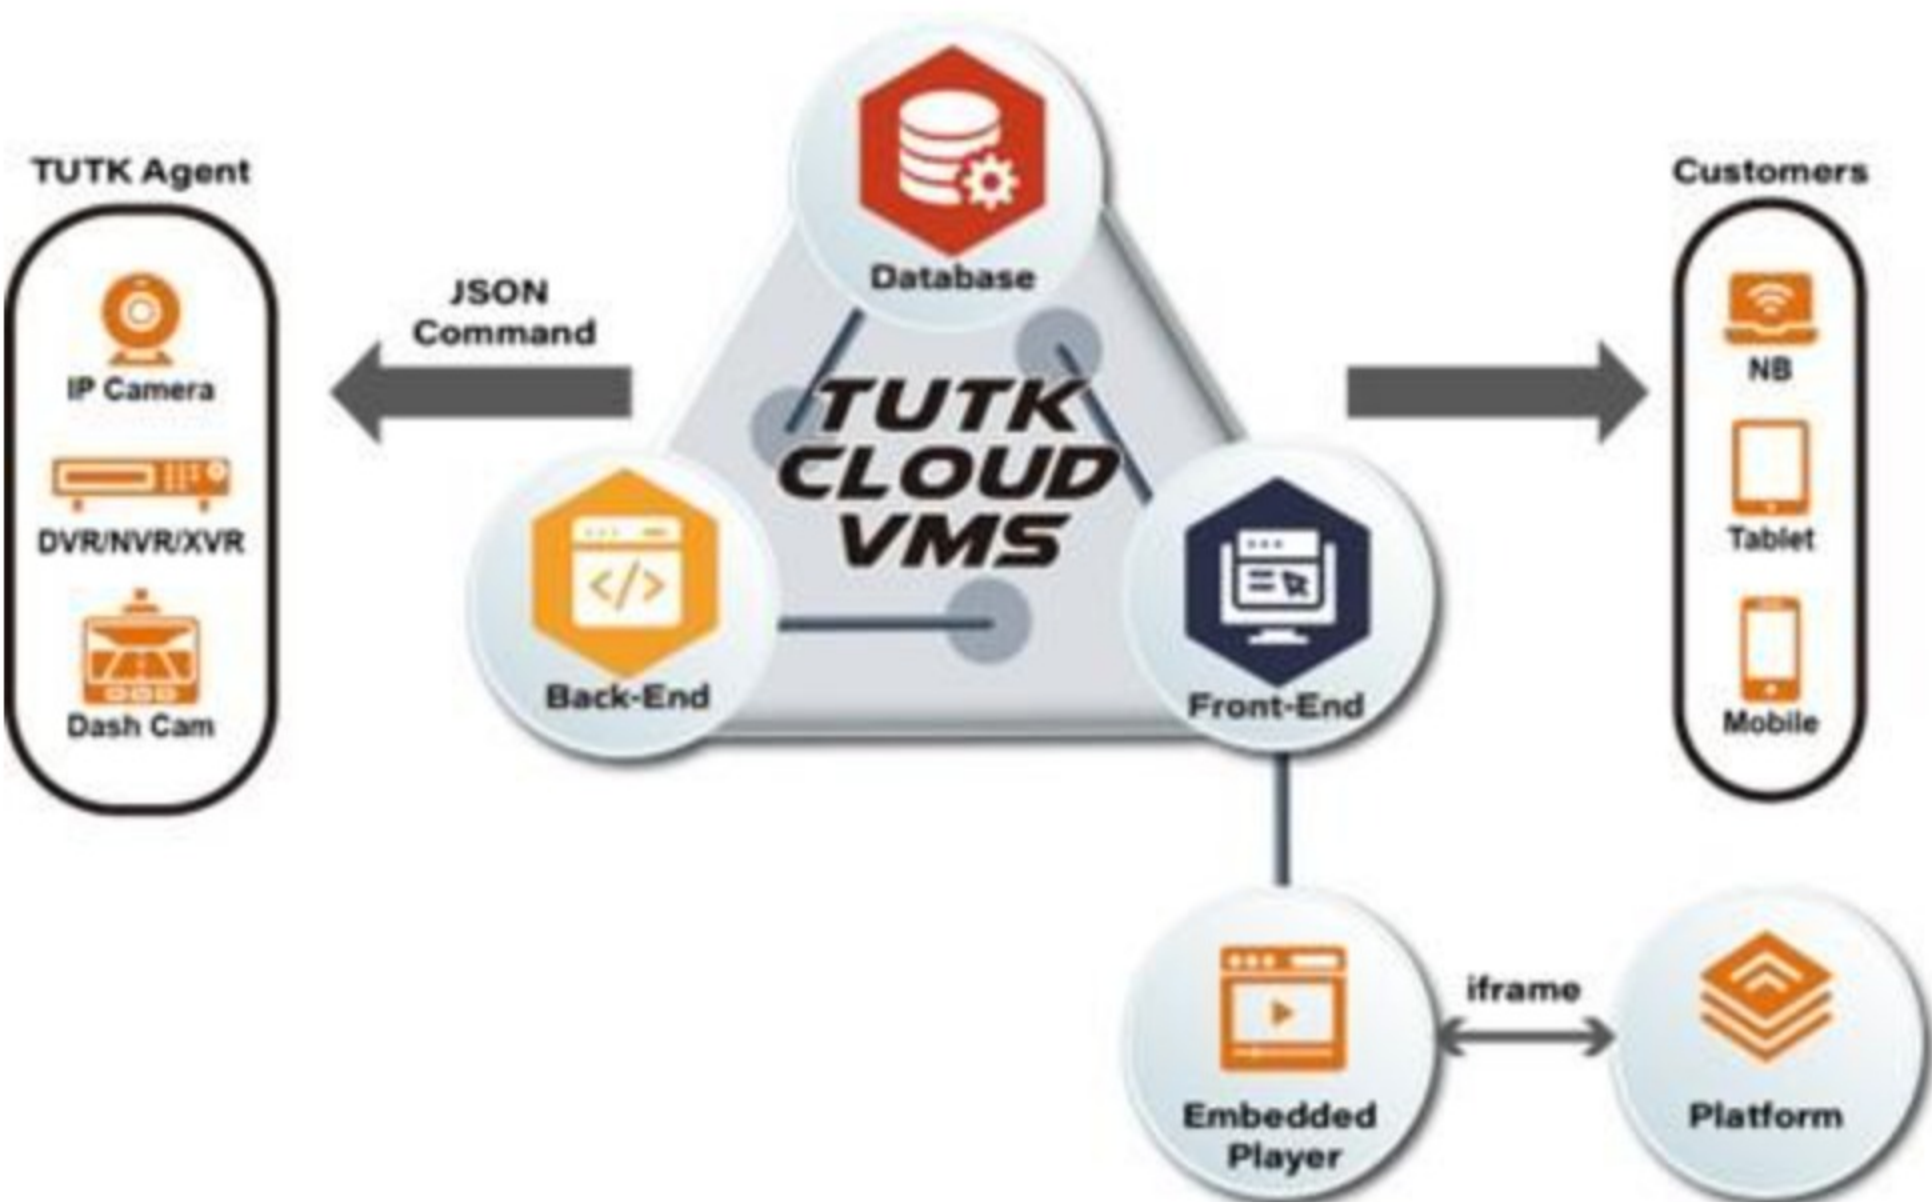

Hausetopia App – A Ready-to-use Application

Hausetopia App – A ready-to-use application

Hausetopia App, a multi-function application, delivers a secure and connected environment among IoT devices and allows users to easily create various automated scenarios. It enables customers to build their own branded app easily and save production time to market especially with hardware from different vendors, encompassing remote access, monitoring, and smart sensing management for IoT devices for the end users.

Cloud VMS - Cloud Video Management System

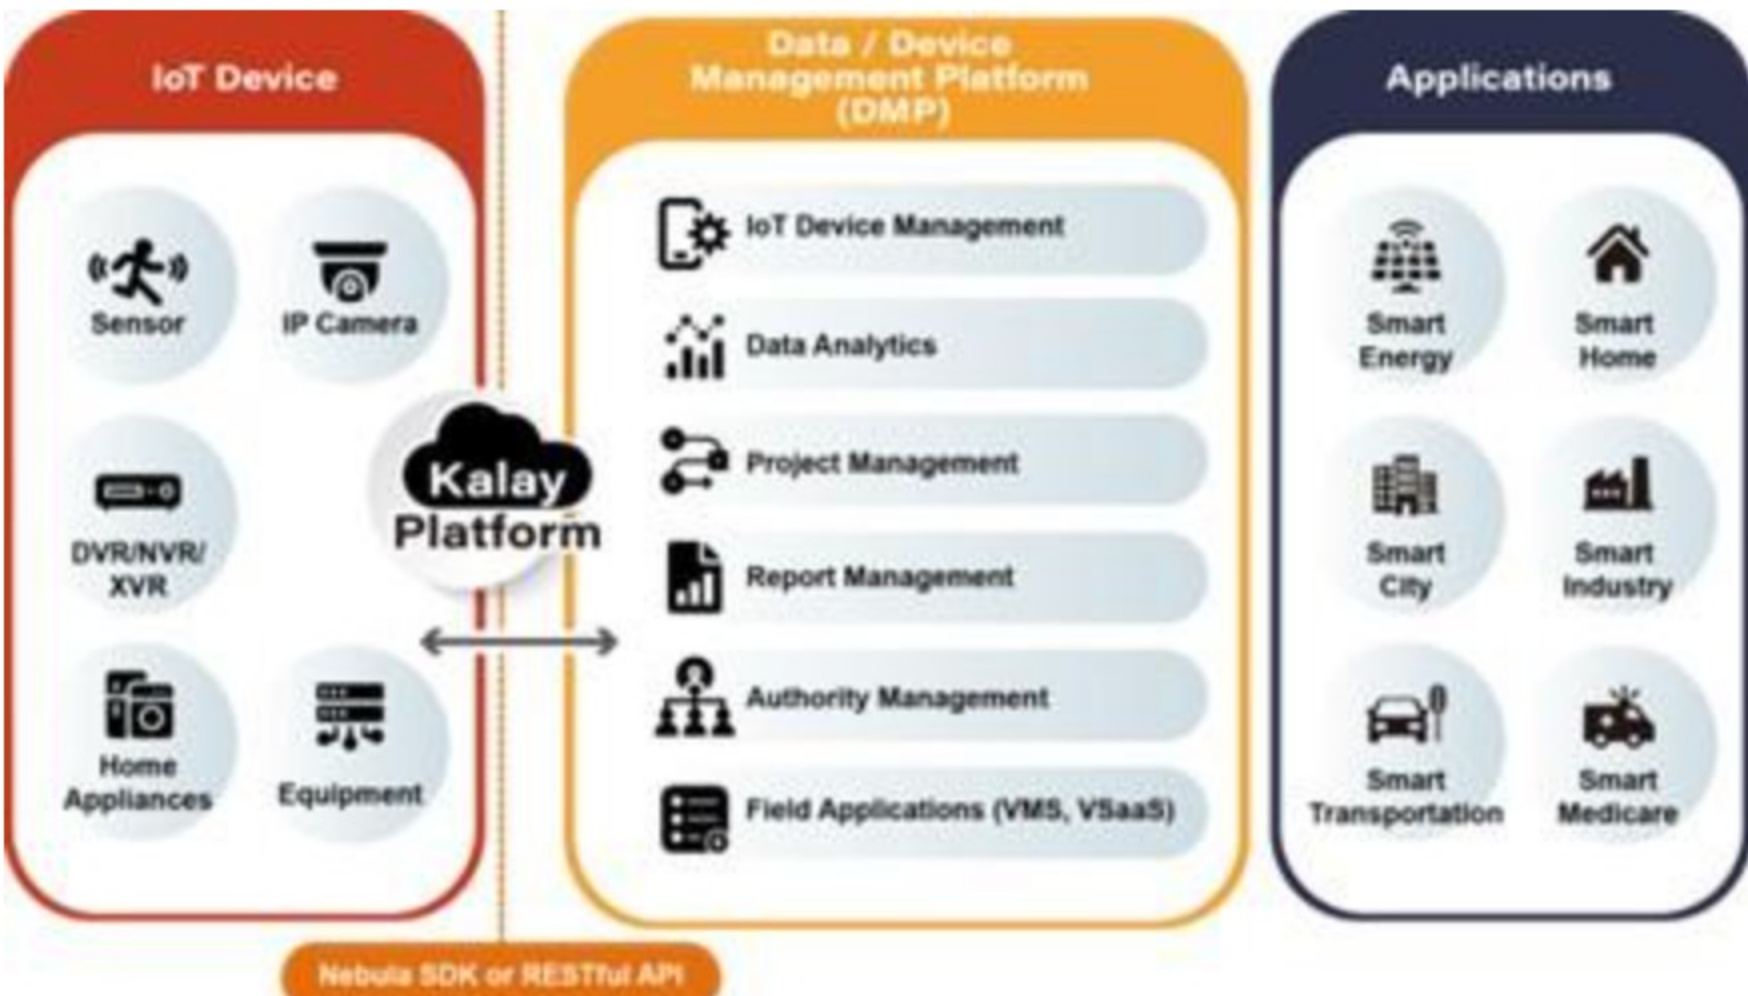

Cloud VMS - Cloud video management system

With Kalay Cloud VMS SDK plug-in, businesses can easily direct any IP Camera, wireless camera, NVR, XVR, also associated data from access control and sensors to the cloud and are able to manage and provide value-added service in one single platform.

It enables users or installers to remotely configure, monitor, smart search, video record, and do maintenance via the cloud under an encrypted transmission channel and optimizes AI features from the edge or from the cloud to avoid false alarms and add business intelligence services.

DMP - [Data / Device Management Platform](#)

DMP - Data / device management platform

TUTK's DMP provides an excellent data management experience for businesses to collect, store, view data, and manage security surveillance devices remotely. Through this platform, businesses can control and check real-time statuses of their IoT devices. In the event of safety or security threats, businesses can utilize this platform to effectively prevent incidents from escalating.

The highlights in the exhibition will only show a part of TUTK's commitment to leveraging IoT technology to support various hardware devices to become smarter. TUTK will continue to cooperate with ecosystem partners to develop the IoT device community associated with TUTK.
