ThroughTek and Kii collaborate on next generation IoT cloud platform

Press release [Tuesday 5 May 2015]

ThroughTek, provider of innovative M2M solutions, has announced their cooperation with Kii to develop a next generation IoT Cloud Platform. Integration of multimedia solutions will deliver leading surveillance, video streaming, and file sharing capability for retail, agricultural, construction, medical, and telecommunications applications.

The platform empowers security systems allowing home and commercial users to record motion-triggered video to the cloud or personal storage devices. With the integration of IP cameras into the IoT Cloud Platform, instant access to real-time video feeds is available via any internet-connected device.

Integration of multimedia applications to the IoT Cloud Platform enables over-the-top (OTT) broadcast services integrating delivery of a wide variety of third party multimedia content directly to end-user devices, while creating additional revenue opportunities. Users can access and stream videos and music on demand or in real time, providing complete management of personal content anytime, anywhere.

The partnership with Kii represents the latest step in ThroughTek's ongoing initiative to expand its IoT ecosystem of service and content providers. Over 5 million devices on Kalay platform will benefit from this collaboration through firmware upgrade. The collaboration will also empower device manufacturers and mobile carriers with easy and cost-effective solution deployment to generate full-fledged scalable IoT solutions while enhancing user experience at all levels. The Kalay Platform features will be available within Kii Cloud worldwide server infrastructures in the US, Europe, China, Japan, Singapore, and India.

About ThroughTek

Committed to internet cloud platform development, ThroughTek's Kalay platform integration leverages a wealth of APIs for a variety of operating systems, thereby quickly and easily incorporating diversity of devices into online application. ThroughTek is proud to partner with chipset vendors, SoC vendors, OEM/ODM, and major branded companies.
