

ThroughTek Showcases Partner Solutions

2015-06-02 09:58:01 經濟日報 本報訊

ThroughTek, a leading IoT (Internet of Things) & M2M (Machine to Machine) total solution provider, is demonstrating its partner solutions with Kalay Platform integration for SoC, cloud service, and smart home applications at Computex Taipei 2015.

ThroughTek showcases Kalay Platform integration with chipset vendors including Qualcomm, Broadcom, Texas Instrument, MediaTek, NXP, Ambarella, Novatek, AiT and Mars, all enabling connected devices. Onsite, strategic partners such as IBM Softlayer for cloud server, Trend Micro and AllSeen Alliance will also be featuring their solutions and discussing various IoT opportunities.

For smart home applications, ThroughTek is displaying IoT-enabled offerings from Sampo, including television, cooling system, and air purifier products. ThroughTek's Kalay Apps provide interactive presentations of ThroughTek's market-proven P2P (Peer to Peer) technology and VSaaS (Video Surveillance as a Service) solutions, enabling real-time monitoring and control for home automation systems with logic engine rule settings.

"One of the greatest challenges in the tech industry is finding an open standard platform supporting full hardware/software

integration. ThroughTek provides the perfect solution to bring connected devices into its ecosystem for home, small/medium business and enterprise use," said Patrick Kuo, CEO of ThroughTek.

Hardware/software integration is a major focus for Computex this year, with much attention to market perspectives on enterprises leveraging IoT functionality to maximize business opportunities in the changing technological landscape.

Visit ThroughTek at the Taipei World Trade Center (TWTC), Exhibition Hall 3, Booth G0250.
